WHAT IS CLAIMED IS

1. A biaxially oriented multi-layer film which comprises:

(a) a core layer comprising at least about 90% of a syndiotactic polypropylene polymer;

(b) at least one additional layer adjacent to the core layer comprising a material selected from the group consisting of butene-1-propylene random copolymer, ethylene-propylene block copolymer, nylon, polyester, ethylene-vinyl acetate copolymer, ethylene-vinyl alcohol copolymer, ethylene-propylene-butene-1 random terpolymer containing 1 to 5 wt.% random ethylene and 10 to 25 wt.% random butene-1, low density polyethylene, linear low density polyethylene, medium density polyethylene, high density polyethylene, and blends thereof; and

(c) wherein the shrinkage of the biaxially oriented multi-layer film at 135° C is less than 25% in the machine and transverse directions.

2. The biaxially oriented multi-layer film of claim 1 wherein the shrinkage at 135° C is less than 16% in the machine and transverse directions.

3. The biaxially oriented multi-layer film of claim 1 wherein the shrinkage at 135° C is less than 8% in the machine and transverse directions.

4. The biaxially oriented multi-layer film of claim 2 further comprising a skin layer adjacent to at least one additional layer wherein the skin layer comprises a polyolefin.

5. The biaxially oriented multi-layer film of claim 4 wherein the skin layer is a polyolefin selected from the group consisting of isotactic polypropylene, ethylene-propylene random copolymer, ethylene-propylene block copolymer, ethylene-propylene-butene-1 terpolymer, and blends thereof.

6. The biaxially oriented multi-layer film of claim 5 comprising a second layer adjacent to the core layer comprising a material selected from the group consisting of butene-1-propylene random copolymer, ethylene-propylene block copolymer, nylon, polyester, ethylene-vinyl acetate copolymer, ethylene-vinyl alcohol copolymer, ethylene-propylene-butene-1 random terpolymer containing 1 to 5 wt.% random ethylene and 10 to 25 wt.% random butene-1, low density polyethylene, linear low density polyethylene, medium density polyethylene, high density polyethylene, and blends thereof.

7. The biaxially oriented multi-layer film of claim 2 having a coating comprising a material selected from the group consisting of polyvinylidene chloride, a polyvinyl alcohol, an acrylic polymer, and blends thereof.

8. The biaxially oriented multi-layer film of claim 2 wherein the at least one additional layer comprises silica particles.

9. The biaxially oriented multi-layer film of claim 2 comprising an alicyclic hydrocarbon.

10. A biaxially oriented multi-layer film which comprises:

(a) a core layer comprising a syndiotactic propylene polymer;

(b) a first outer layer adjacent to a first side of the core layer wherein the first outer layer comprises a material selected from the group consisting of butene-1-propylene random copolymer, ethylene-propylene block copolymer, nylon, polyester, ethylene-

vinyl acetate copolymer, ethylene-vinyl alcohol copolymer, ethylene-propylene-butene-1 random terpolymer containing 1 to 5 wt.% random ethylene and 10 to 25 wt.% random butene-1, low density polyethylene, linear low density polyethylene, medium density polyethylene, high density polyethylene, and blends thereof;

(c) a second outer layer applied to an outer surface of the first outer layer, wherein the second outer layer comprises a material selected from the group consisting of butene-1-propylene random copolymer, ethylene-propylene block copolymer, nylon, polyester, ethylene-vinyl acetate copolymer, ethylene-vinyl alcohol copolymer, ethylene-propylene-butene-1 random terpolymer containing 1 to 5 wt.% random ethylene and 10 to 25 wt.% random butene-1, low density polyethylene, linear low density polyethylene, medium density polyethylene, high density polyethylene, and blends thereof;

(d) a third outer layer adjacent to a second side of the core layer, wherein the third outer layer comprises a material selected from the group consisting of butene-1-propylene random copolymer, ethylene-propylene block copolymer, nylon, polyester, ethylene-vinyl acetate copolymer, ethylene-vinyl alcohol copolymer, ethylene-propylene-butene-1 random terpolymer containing 1 to 5 wt.% random ethylene and 10 to 25 wt.% random butene-1, low density polyethylene, linear low density polyethylene, medium density polyethylene, high density polyethylene, and blends thereof;

(e) a fourth outer layer applied to an outer surface of the third outer layer, wherein the fourth outer layer comprises a material selected from the group consisting of butene-1-propylene random copolymer, ethylene-propylene block copolymer, nylon, polyester, ethylene-vinyl acetate copolymer, ethylene-vinyl alcohol copolymer, ethylene-propylene-butene-1 random

terpolymer containing 1 to 5 wt.% random ethylene and 10 to 25 wt.% random butene-1, low density polyethylene, linear low density polyethylene, medium density polyethylene, high density polyethylene, and blends thereof; and

(f) wherein the shrinkage of the biaxially oriented multi-layer film at 135° C is less than 25% in the machine and transverse directions.

11. The biaxially oriented multi-layer film of claim 10 wherein the shrinkage at 135° C is less than 16% in the machine and transverse directions.

12. The biaxially oriented multi-layer film of claim 11 wherein the shrinkage at 135° C is less than 8% in the machine and transverse directions.

13. A process for preparing a biaxially oriented multi-layer film having a shrinkage at 135° C of less than 25% in the machine and transverse directions which comprises the steps of:

(a) melt coextruding a film comprising: (i) a core layer comprising at least about 90% of a syndiotactic polypropylene, (ii) a first additional layer adjacent to a first side of the core layer comprising materials selected from the group consisting of butene-1-propylene random copolymer, ethylene-propylene block copolymer, nylon, polyester, ethylene-vinyl acetate copolymer, ethylene-vinyl alcohol copolymer, ethylene-propylene-butene-1 random terpolymer containing 1 to 5 wt.% random ethylene and 10 to 25 wt.% random butene-1, low density polyethylene, linear low density polyethylene, medium density polyethylene, high density polyethylene, and blends thereof, and (iii) a second additional layer adjacent to a second side of the core layer comprising materials selected from the

group consisting of butene-1-propylene random copolymer, ethylene-propylene block copolymer, nylon, polyester, ethylene-vinyl acetate copolymer, ethylene-vinyl alcohol copolymer, ethylene-propylene-butene-1 random terpolymer containing 1 to 5 wt.% random ethylene and 10 to 25 wt.% random butene-1, low density polyethylene, linear low density polyethylene, medium density polyethylene, high density polyethylene, and blends thereof, and

(b) biaxially orienting the coextruded combination in a machine and a transverse direction.

14. The process of claim 13 wherein the biaxially oriented multi-layer film have a shrinkage at 135° C of less than 16% in the machine and transverse directions.

15. The process according to claim 13 wherein the biaxially oriented multi-layer film has a shrinkage at 135° C of less than 8% in the machine and transverse directions.
